

INSTALLATION INSTRUCTIONS FOR X22989-1 REMOTE BULB STRAP

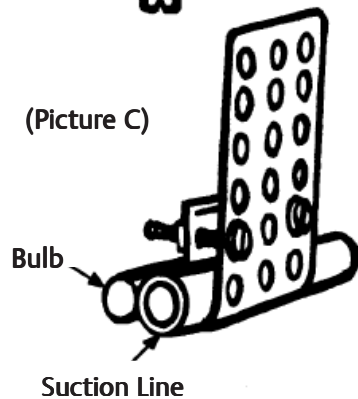

(Picture A)

(Picture B)

(Picture C)

1. Remove hardware from strap.
2. Place the remote bulb in the formed radius of the strap (Picture A).
3. Clean the surface of the suction line where the remote bulb is to be attached. Secure bulb on suction line near coil outlet:
 - a. Leaving the bulb in the formed radius, wrap strap around suction line (Picture B).
 - b. Insert bolt through the last row of holes where it is still possible for them to reach the corresponding set of holes on the opposite side of the strap (Picture B).
 - c. With nuts resting in recess, securely tighten bolts with a screwdriver (Picture C).
4. On lines smaller than 7/8" O.D., install bulb on top of pipe.
5. On line 7/8" O.D. or larger, install bulb on lower half of pipe at a point at either 4 o'clock or 8 o'clock.
6. Make sure:
 - a. Total length of bulb is making good contact with suction line,
 - b. Equal lengths of the bulb are protruding from each side of the strap.
 - c. Bulb is securely fastened to suction line.
