

Mastercella2: Important Installation Instructions

It is extremely important that the fixed ribbon cable connectors are NOT removed. Removal of these connections can damage the MicroProcessor and void warranty.

Please also note that the Mastercella2 is supplied with push in hinges (loose) to support the front face once installation is complete. Hanging the face by the ribbon cable may cause damage to the controller.

Mastercella2 has been designed that if required the whole PCB assembly with mounting frame can be removed as shown in the figure below.

**FIXED CONNECTOR
DO NOT UNPLUG**
